Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 12-15, 18, 19, 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Chin et al '126 (submitted prior art).

Considering claim 12, Chin discloses a method for communicating in a well bore comprising, a) spinning a rotational pulsation system to create a first frequency (see col 9, lines 27-33); b) applying an electrical load to the system to modify the first frequency to a second frequency (see col 9, lines 52-55); c) removing the electrical load to resume the first frequency (see col 9, line 67 to col 10, line 8); d) selecting between the applying and removing conditions according to a message to be communicated.

Considering claim 13, Chin discloses the limitation of this claim (see col 9, lines 22-26).

Considering claim 14, Chin discloses the limitation of this claim (see col 9, lines 52-55).

Considering claim 15, Chin discloses the limitation of this claim (see fig 4).

Art Unit: 2612

Considering claim 18, Chin discloses the limitation of this claim (see col 9, line 67 to col 10, line 8).

Considering claim 19, Chin discloses the limitation of this claim (see col 9, lines 52-60).

Considering claim 22, Chin discloses the limitation of this claim (see col 12, lines 45-51).

5. The following is an examiner's statement of reasons for allowance: in the environment of a rotational pulsation system the closes prior art Chin et al USP 5,740,126 fails to teach or suggest, with respect to claim 1, a rotor having a permanent magnets; a centralizer having coils and a stator package positioned to operably communication with the permanent magnets; a rotational screen disk disposed at the rotor and a static screen disk disposed at the rotational screen disk. With respect to claim 16 Chin fails to teach or suggest multiple transmission systems creating the same

first and second frequencies resulting in constructive interference. With respect to claim 20 Chin fails to teach or suggest the difference between multiple system's first and second frequencies is employed to create another communication frequency signal having a first and second frequency utilizing one frequency from each of two systems. Claims 17 and 21 depend from objected claims 16 and 20 respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
